UNIQUE

Developed by experts

- Created with leading biomaterials experts
- Exhibits a wide array of product features
- Backed by extensive experience and feedback surveys

Specialised for biomaterials

- Unique platform for biomaterials and biomaterial-based medical devices
- Provides extensive information on each biomaterial and medical device
- Adapted product information for each biomaterial category

Designed for innovation

- Displays both approved and novel biomaterials
- Showcases cutting-edge advancements in biomedicine
- Encourages ongoing development and research

YOUR BENEFITS!

Enhanced Visibility

Showcase products, brochures, and services to a broad audience

Wide Range

Present a wide range of offerings: medical biomaterials, raw materials, equipment, and services

Networking

Connect with key players in the industry, fostering partnerships and collaborations

Funding

Gain visibility among European actors

User Friendly

Straightforward registration process for suppliers on the AdminBase

Success

PRESENT A WIDE RANGE OF OFFERINGS

Medical Biomaterials

Bioinks, Bone Substitute Materials, Drug Delivery Systems, Hemostatics, Implants, Instruments & Surgical Kits, Membranes, Prosthetics, Soft Tissue Grafts, Tissue Scaffolds, Wound Dressings

Software

CAD/CAM etc.

Raw Materials

Ceramics, Composites, Metals, Polymers

Services

Consulting & Regulatory Compliance, Design & Development, Maintenance & Repairs, Manufacturing & Fabrication, Testing & Analysis

Equipment

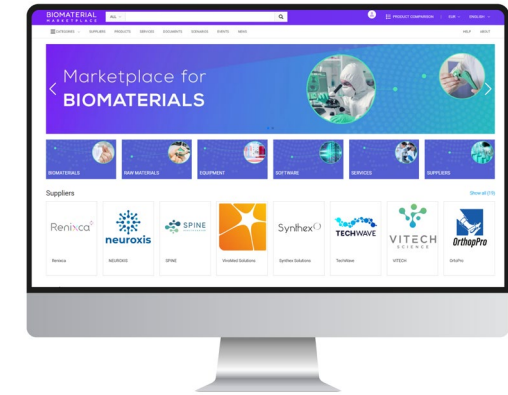

Bioprinters, etc.

OUR MODULES

Suppliers

Manage your profile, products, services, documents, news etc. for listing on the marketplace.

Products

Present each product with a detailed profile, images and comprehensive product features. Extensive filtering options will guide users to find your solutions.

Services

Offer or find a wide variety of services, including testing and legal support related to biomaterials.

Documents

Upload brochures. Users can filter documents by language and document type & download PDFs.

News

Keep customers up-to-date with a dedicated news module. Showcase latest developments & innovations.

Events

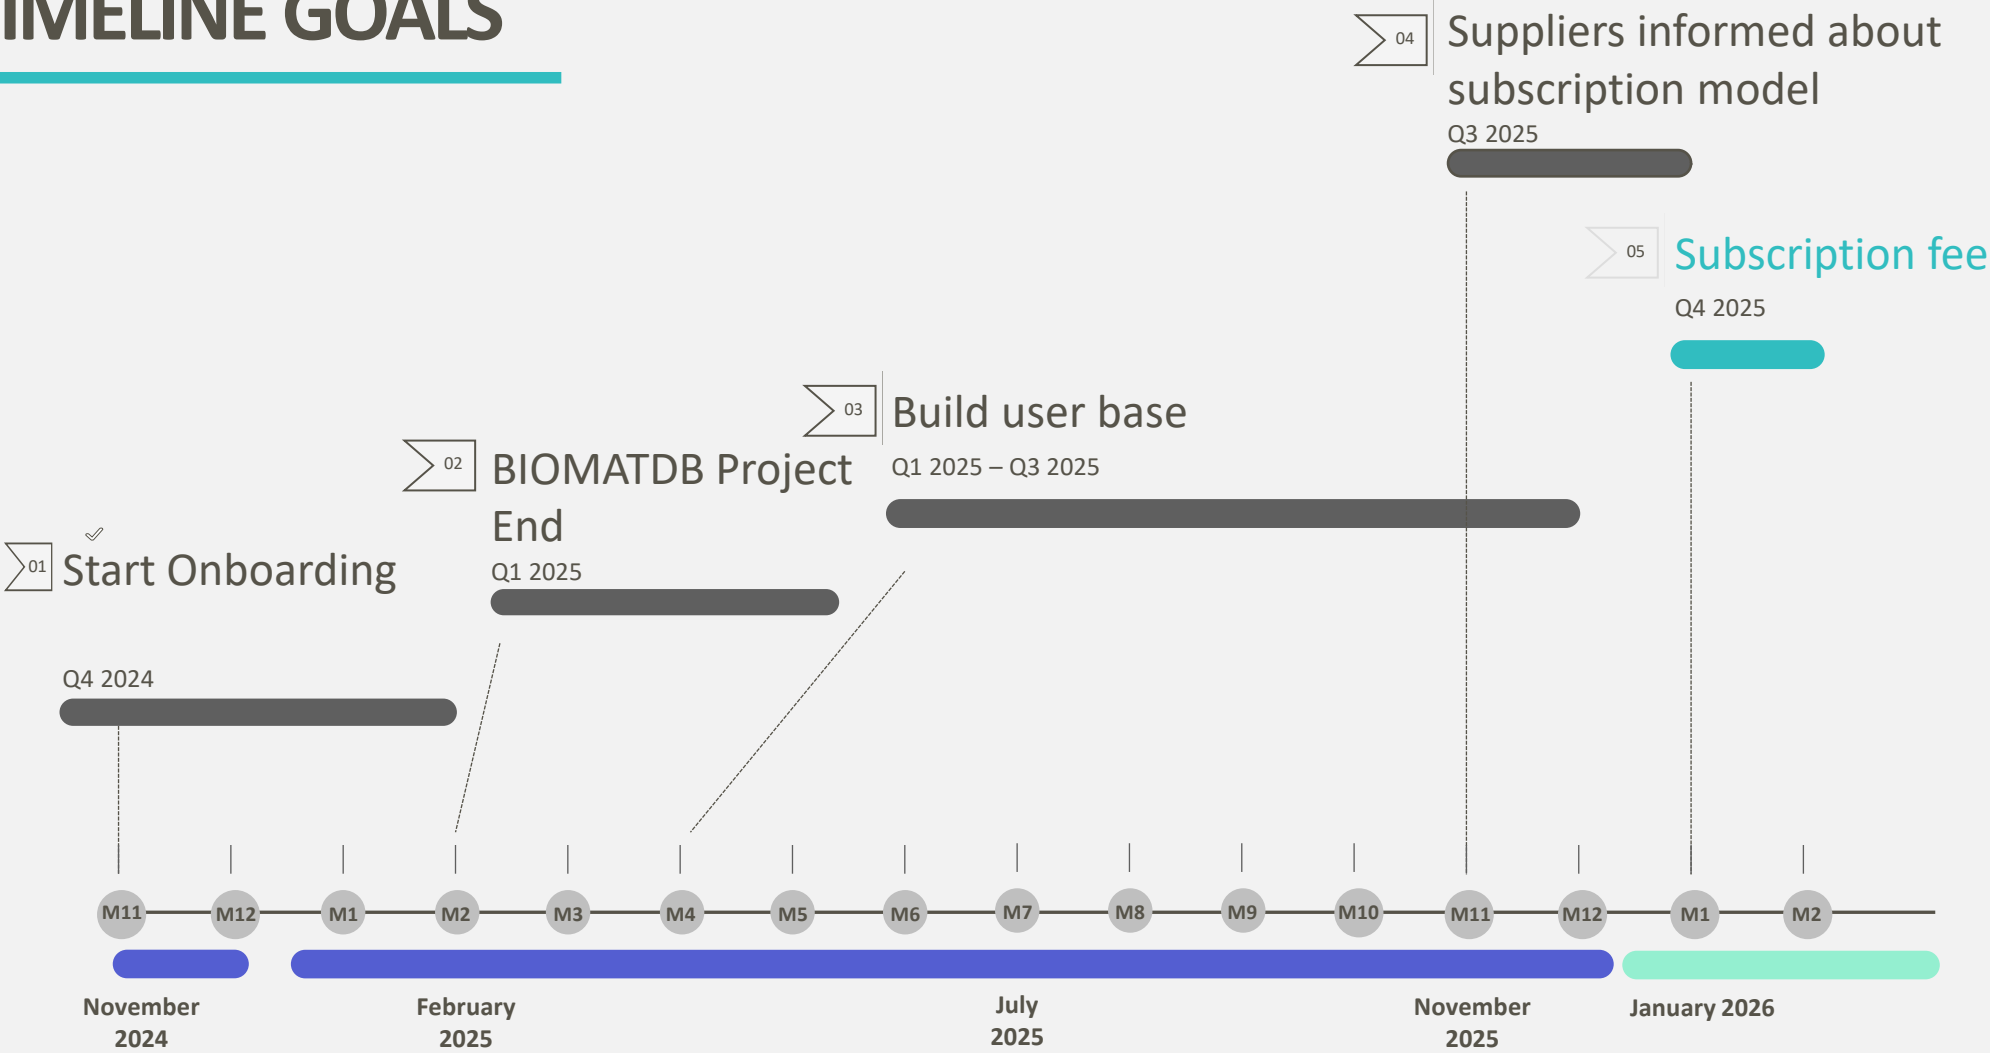

Access an interactive events module for webinars, workshops, symposiums, and exhibitions.

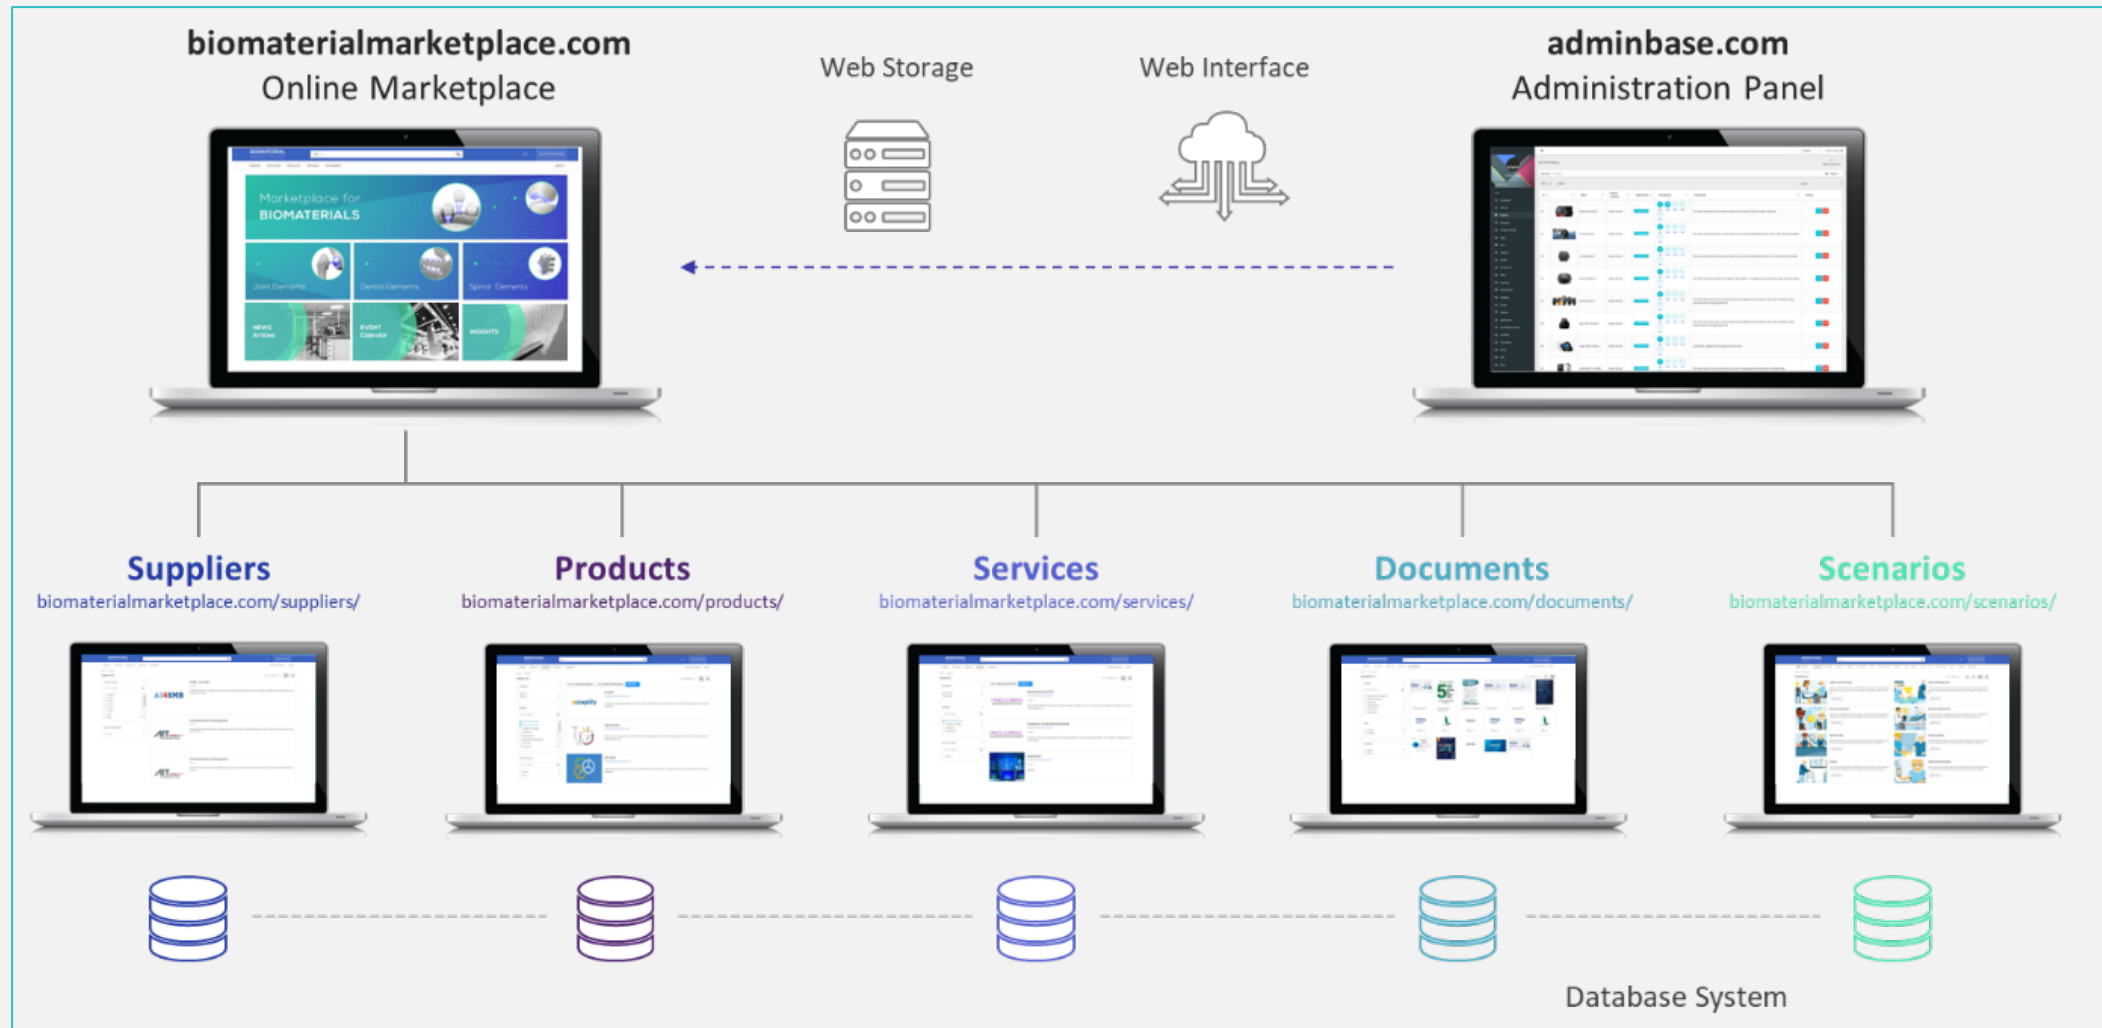

Scenarios

Link your products to relevant use-cases such as the medical application or anatomical region, helping users to quickly find your solutions.

Description*

The hydrogel composition of Ink35X allows for a stable crosslinking process, enabling the creation of complex tissue structures with high resolution. It is compatible with multiple cell types, including stem cells, and promotes cell adhesion, proliferation, and matrix deposition. Ink35X can be easily customised for specific tissue models, offering versatility in research and clinical environments.

Description*

B

I

Paragraph

Our Biomaterial Testing service provides comprehensive analysis and evaluation of materials used in medical, dental, and tissue engineering applications. Designed to ensure the highest standards of safety, functionality, and biocompatibility, this service supports both research and product development across various biomaterial types, including polymers, ceramics, and metals.

We offer a wide range of testing protocols, including mechanical strength testing, degradation analysis, biocompatibility assessments, and chemical composition analysis. Each test is performed using advanced laboratory equipment to meet industry-specific regulatory requirements and provide accurate, reliable data.

Whether you are developing new biomaterials or verifying the quality and performance of existing products, our expert team ensures that every material meets the necessary standards for clinical and commercial use. With customizable testing packages, fast turnaround times, and in-depth reporting, our Biomaterial Testing service is the ideal solution for ensuring your biomaterials meet stringent safety and performance criteria.

This service is suited for manufacturers, researchers, and healthcare organizations seeking validation and regulatory compliance for biomaterial-based products.
